Spis treści

Preface

1. Fractional differential equations

- 1.1 Definition of Euler gamma function and its properties
- 1.2 Mittag-Leffler function
- 1.3 Definitions of fractional derivative-integral
 - 1.3.1 Riemann-Liouville definition
 - 1.3.2 Caputo definition
- 1.4 Solutions of the fractional state equation of continuous-time system
- 1.5 Positivity of the fractional systems
- 1.6 External positivity of the fractional systems
- 1.7 Positive continuous-time linear systems with delays
- 1.8 Positive linear systems with different fractional orders
 - 1.8.1 Linear differential equations with different fractional orders
 - 1.8.2 Positive fractional systems with different fractional orders
- 1.9 Descriptor fractional continuous-time linear systems
 - 1.9.1 Solution of the descriptor fractional systems
 - 1.9.2 Drazin inverse method for the solution of fractional descriptor continuous-time linear systems
- 1.10 Definition of n-order difference.
- 1.11 State equations of the discrete-time fractional linear systems
 - 1.11.1 Fractional systems without delays
 - 1.11.2 Fractional systems with delays
- 1.12 Solution of the state equations of the fractional discrete time system
 - 1.12.1 Fractional systems with delays
 - 1.12.2 Fractional systems with delays in state vector
 - 1.12.3 Fractional systems without delays

- 1.13 Positive fractional linear systems
- 1.14 Externally positive fractional systems
- 1.15 Fractional different orders discrete-time linear systems
- 1.16 Positive fractional different orders discrete-time linear systems
- 1.17 Descriptor fractional discrete-time linear systems
 - 1.17.1 Solution to the state equation

2. Positive fractional electrical circuits

- 2.1 Fractional electrical circuits
- 2.2 Positive fractional electrical circuits
 - 2.2.1 Fractional R, C, e type electrical circuits
 - 2.2.2 Fractional R, L, e type electrical circuits
 - 2.2.3 Fractional R, L, C type electrical circuits
- 2.3 Analysis of the fractional electrical circuits
- 2.4 Reciprocity theorem for fractional circuits
- 2.5 Equivalent voltage source theorem and equivalent current source theorem

3. Descriptor linear electrical circuits and their properties

- 3.1 Descriptor linear electrical circuits
 - 3.1.1 Regularity of descriptor electrical circuits
 - 3.1.2 Pointwise completeness of descriptor electrical circuits
 - 3.1.3 Pointwise degeneracy of descriptor electrical circuits
- 3.2 Descriptor fractional linear electrical circuits
- 3.3 Polynomial approach to fractional descriptor electrical circuits
- 3.4 Positive descriptor fractional electrical circuits
 - 3.4.1 Pointwise completeness and pointwise degeneracy of positive fractional descriptor electrical circuits.

4. Stability of positive standard linear electrical circuits.

- 4.1 Stability of positive electrical circuits
- 4.2 Positive unstable R, L, e electrical circuits
- 4.3 Positive unstable G, C, i_s electrical circuits
- 4.4 Positive unstable R, L, C, e type electrical circuits

5. Reachability, observability and reconstructability

- 5.1 Decomposition of the pairs (A, B) and (A, C) of linear circuitsUI
- 5.2 Reachability of positive electrical circuits
- 5.3 Observability of positive electrical circuits
- 5.4 Constructability of positive electrical circuits
- 5.5 Decomposition of the positive pair (A, B)
- 5.6 Decomposition of the positive pair (A, C)
- 5.7 Decoupling zeros of the positive electrical circuits
- 5.8 Reachability of positive fractional electrical circuits
- 5.9 Observability of positive fractional electrical circuits

6. Standard and fractional linear circuits with feedbacks

- 6.1 Linear dependence on time of state variable in electrical circuits
- 6.2 Zeroing of the state vector of standard circuits by state-feedbacks
- 6.3 Zeroing of the state vector of standard circuits by output-feedbacks
- 6.4 Zeroing of the state vector of fractional electrical circuits **by** state-feedbacks

7. Minimum energy control of electrical circuits

- 7.1 Minimum energy control of positive standard electrical circuits
- 7.2 Minimum energy control of fractional positive electrical circuits
- 7.3 Minimum energy control of fractional positive electrical circuits

8. Fractional 2D systems described by the Roesser model

- 8.1 Fractional derivatives and integrals of 2D functions
- 8.2 Descriptor fractional 2D Roesser model and its solution
- 8.3 Fractional-order model of the long transmission line
- 8.4 Standard fractional 2D Roesser model and its solution
- 8.5 Generalization of Cayley-Hamilton theorem

A. Laplace transforms and Z-transforms

- A.1 Convolutions of continuous-time and discrete-time functions and their transforms
- A.2 Laplace transforms of derivative-integrals
- A.3 Laplace transforms of two-dimensional fractional differintegrals
- A.4 Z-transforms of discrete-time functions

B. Elementary operations on matrices

C. Nilpotent matrices

D. Drazin inverse matrix

- D.1 Definition and properties of Drazin inverse matrix
- D.2 Procedure for computation of Drazin inverse matrices
